

Growth has led to "traffic jams on the rails"

The four focus corridors: our main bottlenecks

- 1 Dortmund – Cologne**
- 2 Fulda – Mannheim**
- 3 Würzburg – Nuremberg**
- 4 Greater Hamburg area**

Corridors where traffic congestion is high¹ account for only some **5%** of our network.

But they are bottlenecks that affect roughly **72%** of our long distance passenger kilometers and **19%** of our long distance train kilometers.

Some **40%** of the congestion in long distance traffic has its roots in the **four focus corridors**.

¹ Focus corridors and other bottleneck lines
